

# MAINTAINING OUTDOOR TIMBER FINISHES

Congratulations on your new timber addition & choice of using a premium wood care finish from the Dulux Group of companies.

Outdoor timber projects are an intrinsic part of the warm, sunny Queensland lifestyle so they deserve your love & care. Unfortunately timber & weather don't mix & outdoor timber surfaces can be greatly affected by Queensland's climatic extremes.

**Hot Sun &  
UV Light**

**Summer  
Storms & Salt**

**Tree  
Debris**

The correct maintenance program will prolong the life & look of your outdoor timber project & will save you money on replacing boards & major repairs.

## INSTALLATION COATING

The pre-oiling & top coats provided from **5 Star Timbers** has given your timber substrate a durable & robust finish, the modern water wash up decking oil or staining will never peel, flake, blister or delaminate.

Please note: Three (3) top coats applied as first wood coating application have been found to give longer lasting protection. 2 or 3 top coats to be at the owner or selected applicators discretion.

If the above coats have been applied correctly, your coating will not need to be sanded or water blasted to bare timber when a regular maintenance program is undertaken.

## 3 STEP MAINTENANCE

We recommend following the below maintenance steps once every 12 months (6 monthly in severe environments).

1

**CHECK:** Undertake a review on all surfaces of your timber project. Any areas showing deterioration should be lightly sanded (if needed).

2

**CLEAN:** Clean all timber areas to be recoated with **FEAST WATSON** 'Wood Clean'.

3

**TOP COAT:** Apply a fresh top coat of your chosen **FEAST WATSON** water wash-up finish, OR....

## LOOKING FOR SOMEONE TO DO THE WORK FOR YOU?

Give 5 Star Timbers a call on  
**07 3386 0595** or **07 3386 1055**  
& one of our professional applicators will contact you regarding maintenance.
